flexbox

L,

one dimensional
layout system

row, col

whitespace

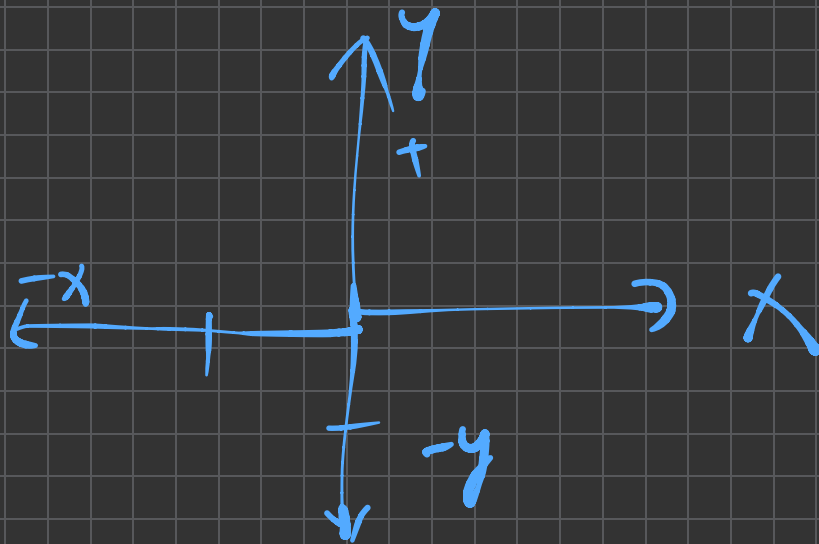

inline-block

Two axes

→ main axis

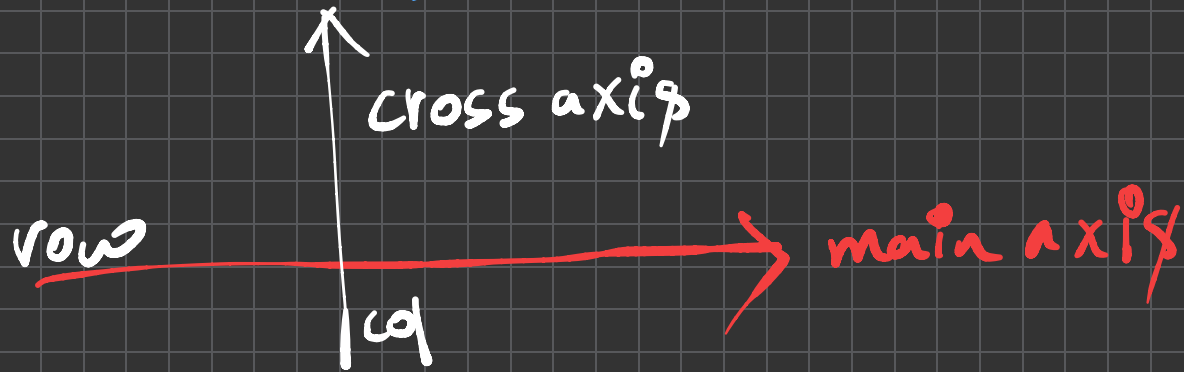

→ cross axis

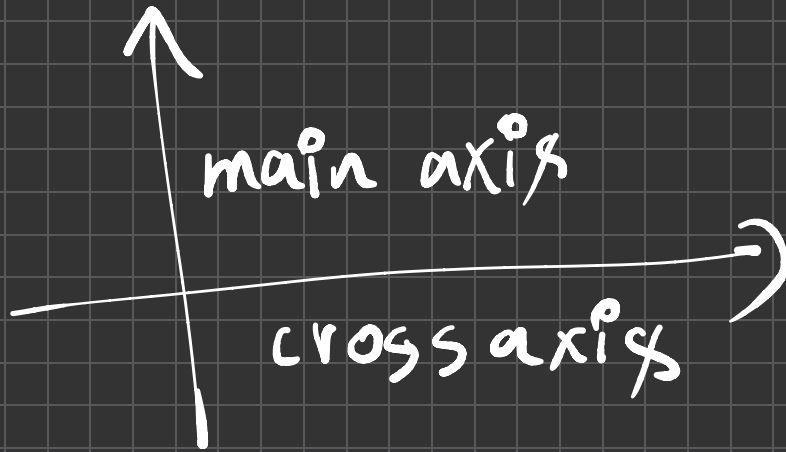

flex → default direction
↓
row

flex-direction

flex-direction : row | col |

flex direction: `col`

justify-content → main axis

align-items → cross axis

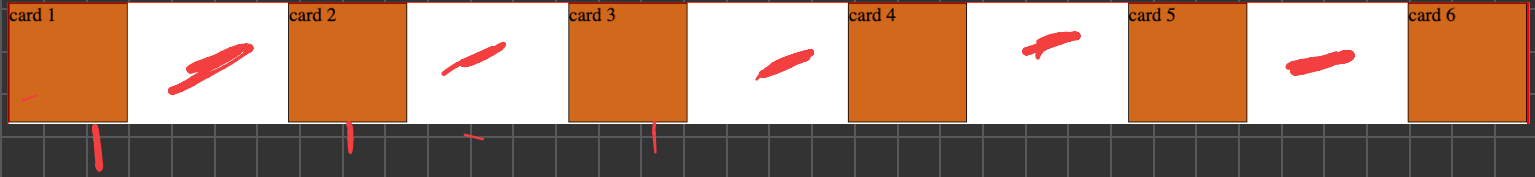

main & cross axis depend on
flex ki direction
⇒

justify-content : start → by default
: center
: end
/

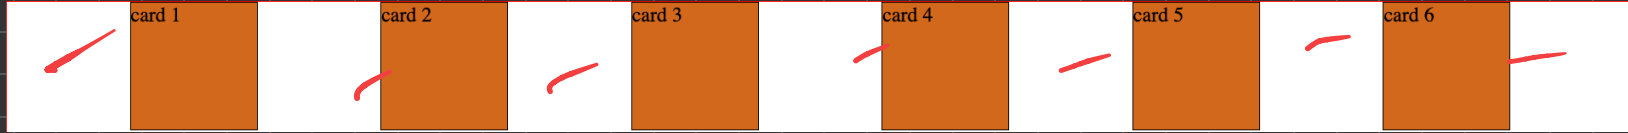

justify - content : space-around

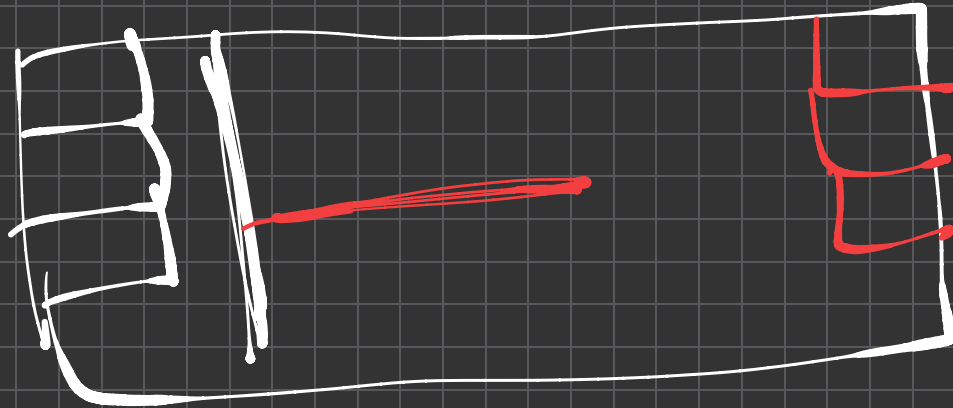

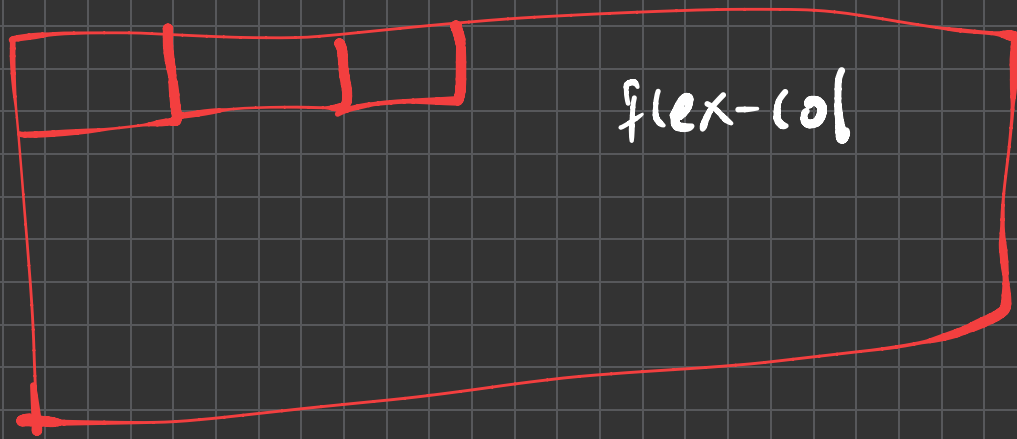

justify - content : space-between

justify-content: space-evenly

Just
main axis
CROSS axis
↓
align

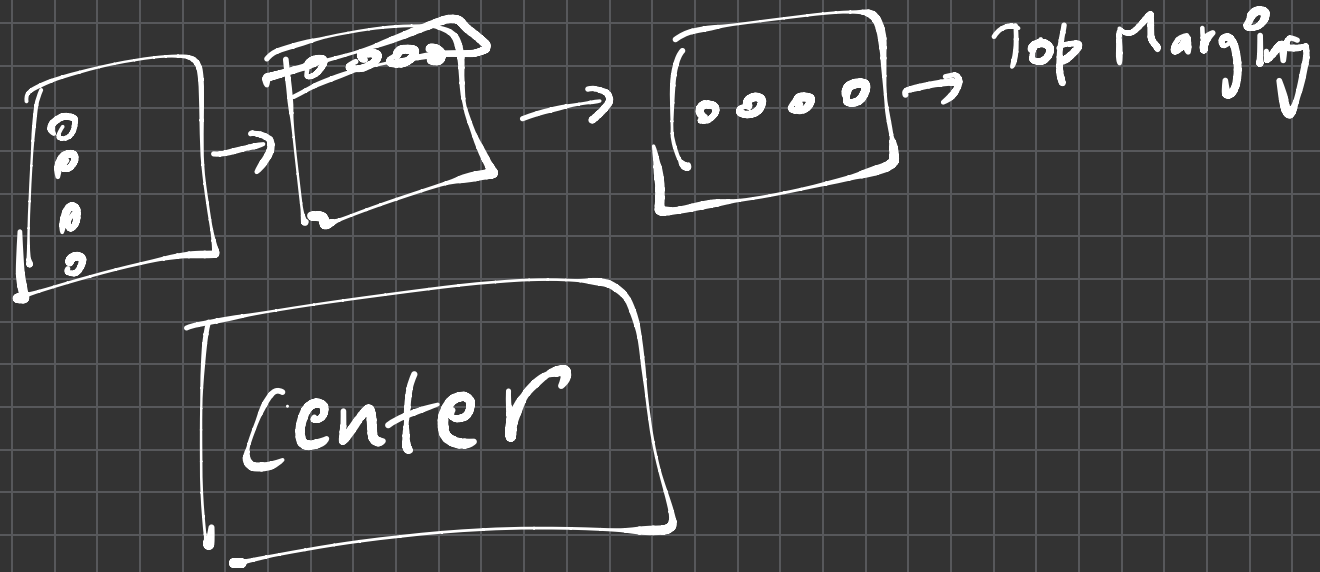

align-item

align content

cross axis

single row/col

multiple rows/cols

flexbox

container

item

flex
properties

By default $\rightarrow$ row

flex-direction $\rightarrow$ row | col | col-rev | row-rev
 $\downarrow$

main axis ?

cross axis

$\downarrow$
perpendicular to main

justify - content : main axis

align - items : cross axis

align - content : cross axis

(multiple rows/cols)

{ flex-basis
flex-shrink → project
flex-grow

50% HW ✓ practical

row

col

horizontal

vertical

main axis

cross axis.
