

Tag & Element

(Lecture 04)

Tag

< keyword >
↑

< keyword >
↓

Browser ko
batata hai
ki konse type
ka content hai

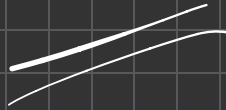

Tag ek keyword hota hai angle brackets
< > ke andar, jo browser ko batata hai
"yeh content kis type ka hai"

Summary Notes

By - Nishant Sir

Telegram

pair
opening tag

→ content

closing tag

<body> content </body>

↓
opening

↓
closing

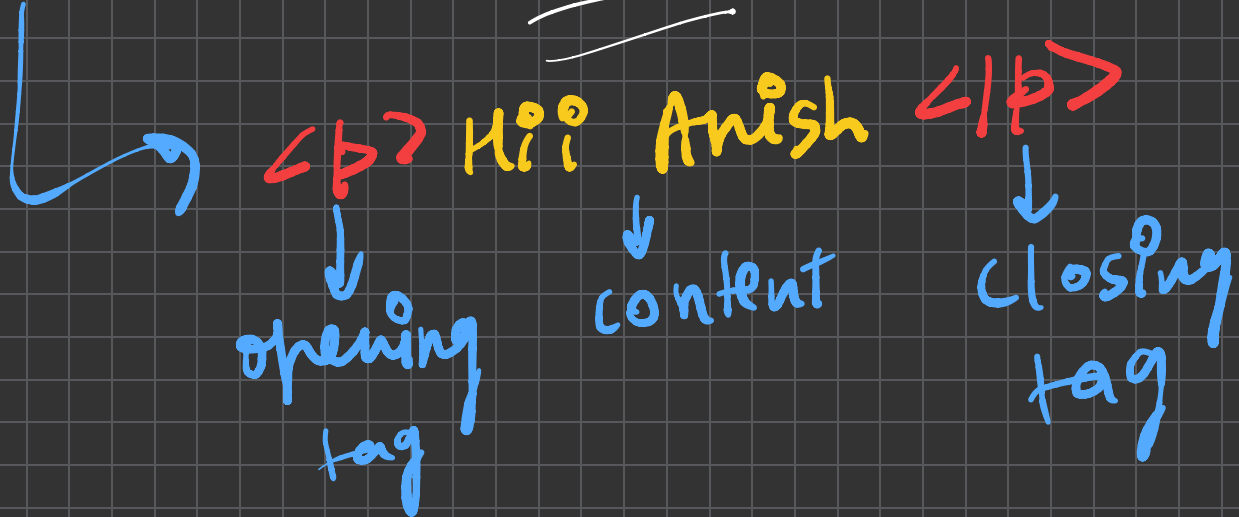

Self closing tag

→ no content
↓
but attributes

<meta >

Tag → keyword
`<p>` `</p>`

Element → complete package

Element = Opening tag + Content + Closing tag - poora package

Attributes

Attribute ek extra detail/property hota hai jo hum opening tag ke andar likhte hai

Extra information

→ Self closing tag

id
class

title

→ opening tag

→ multiple attributes

Heading Tag

Heading ek title ya subtitle hota hai - jo batata hai "yeh section kis baare mein hai"

HTML mein 6 headings hote hain: <h1> se <h6> tak

Ek page mein normally sirf ek hi <h1> use karna chahiye - yeh page ka main title hota hai

HTML

H2 → HTML

Paragraph Tag

<p> content </p>

How to become web dev?

→ p →

<p> tag normal text/content ke liye use hota hai - jaise koi paragraph kisi essay mein hota hai

Text formatting

Hi! RishiKesh

→ Hi! Rishikesh

→ Hi! RishiKesh

b vs strong & i vs em

SEO

mark

$$\underline{x^2 + y^2 = z^2}$$

Div, Span & Block vs inline

↓
Property

Block-level elements

Block element apni poori line lete hain - jaise woh ek poori row/box hai

Inline elements

Inline element sirf **content jitni jagah** leta hai - poori line nahi leta

Block

display

Inline

Div: → block tag
→ special property
bapa pack karne ke liye

`<div>` - ek generic container/box hota hai. Iska koi apna special meaning nahi hai (jaise `<h1>` ka matlab "heading" hota hai) - yeh sirf content ko group/wrap karne ke liye use hota hai.

body

div

heading

div

span → inline

↓
normal text

~~span > Div~~

~~Div > span~~

 - yeh bhi ek generic container hai, lekin chhote level pe - yeh usually ek chhote se hisse (jaise ek word ya phrase) ko wrap karne ke liye use hota hai, poore section ke liye nahi.

span $\neq$ $\downarrow$
(but $\downarrow$
) inline block
